I. INTRODUCTION

The development of communicative competence in English is an aspiration and a request of the Costa Rican society upon the educational system. Advances and extended coverage in the use of information and communication technologies (ICT) as well as transportation are allowing more people to travel, do business and communicate faster across the world. Within this context, English has become the language of international and intercultural communication and trade among countries. It has the status of a lingua franca, the language for transmission of scientific and academic knowledge, and the main door to cutting-age technology.

Speaking English fluently is one of the abilities a 21st Century learner must develop to have access to better life opportunities. The Costa Rican educational system is committed to achieving this goal of having bilingual citizens in two or more languages by means of a comprehensive, articulated curriculum from kindergarten through high school. Given this mandate, the new curriculum has been sequenced so that learners reach a minimum level of English proficiency of A2 when completing primary education and B1 or B2 (depending on the study plans) when completing secondary education progressively, according to the levels described by the Common European Framework of Reference for languages (CEFR). To achieve this goal, curriculum, teaching, learning and assessment have to be aligned at the classroom level as well as in the national test.

English has become a lingua franca, the language of international communication. Millions of people all over the world with the most diverse languages and cultural backgrounds are using English to interact in person and digitally. In 2008, English was declared a national interest to improve the country's competitiveness to bolster the productive sector (decreto ejecutivo 34425-MEP-Comex, La Gaceta N°61, 2008). In order to accomplish this, MEP has taken the following concrete steps towards increasing the English Language Proficency of both teachers and students:

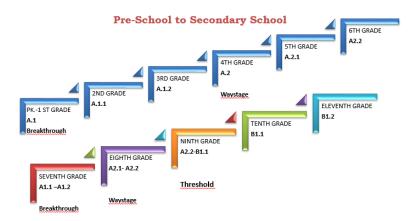

a) Administering to teachers the TOEIC-MEP to determine their baseline English proficiency level with reference to standards articulated in the Common European Framework of Reference, the results of which have been used to design and implement training courses to improve the communicative language ability of teachers and their teaching practices.

- b) Administering to students the TOEIC-Bridge test to determine their baseline English language proficiency level with reference to standards articulated in the Common European Framework of Reference.
- c) Aligning the band descriptors of the CEFR into the new curriculum and extending them to reflect the Costa Rican context. In this respect, the A2 band was established as an exit requirement for primary school learners and B1 or B2 for high school students, depending on the study plans of the respective curriculum (e.g., number of English lessons per week, and/or organization of groups.
- d) Revisioning the relationships between teaching, curriculum and assessment, where learning is conceptualized as the target of education.
- e) Revisioning assessment in classroom and standardized testing contexts and its role in providing empirically based information to both close learning gaps and generate evidence of learning successes.
- f) Promoting a National English Festival as a way to support learners' language development at school.

g) Designing an articulated English language curriculum from preschool to high school that responds to workplace needs in the global context.

Figure 1 presents the proficiency levels articulated in the CEFR as it applies to the English language curriculum in Costa Rica across the grade levels. These levels will be adopted in 2017 starting with first and seventh grade. By 2021, it is expected that progressively the learners will reach level A2 at the end of the Second Cycle and B1 at the end of Diversified Education.

Proficiency Levels Projection for the English Curriculum

Tables 1 and 2 present the CEFR proficiency bands along with performance indicators for the respective cycles. These indicators articulate what learners are able to accomplish with the target language when communicating. Since the CEFR does not specify how language is integrated (e.g., reading to write) in real-life contexts, these performance indicators have been expanded for the Costa Rican context.

Table 1 Costa Rican general descriptors according to CEFR English proficiency bands for First and Second Cycles

Basic User A1	Can introduce him/herself and others and can ask and answer questions about personal details such as where he/she lives, people he/she knows, and things he/she has. Can interact in a simple way provided the other person talks slowly and clearly and is prepared to help. Can understand and use familiar everyday language in the interpersonal and transactional domain and formulaic expressions aimed at the satisfaction of needs that are concrete and level-appropriate. Can show limited ability to use grammatical structures (e.g., punctuation, capitalization, and sentence patterns). VSION OF THE CEFR STANDARDS - INTEGRATION OF LANGUAGE ABILITIES Can use A1 level, grade level, and age appropriate linguistic (e.g., present verb forms), socio-cognitive (e.g., associating strategies) and socio-affective (e.g., cooperating or coping strategies) resources to integrate topical content from oral and written text to perform a goal-oriented product (mini-project) based on an integrated sequence of activities within some domain, scenario, and theme. Linguistic resources include grammatical forms and meanings; socio-cognitive resources include a range of meta-cognitive strategies (planning) and cognitive strategies (revising); and socio-affective resources consist of strategies such as cooperating and coping. Can use A1 level, grade level and age appropriate digital and telecommunication resources to research, plan, and implement the mini-project. Can use A1 level, grade level and age appropriate digital and telecommunication resources to research, plan, and implement the mini-project. Can use level and age appropriate linguistic resources to integrate information from a reading or a listening or other inputs to perform from one skill modality to another (e.g., listening to speak, read to write) to achieve the goal of the scenario. Can display awareness and development of non-cognitive dispositions (such as effort, perseverance, engagement, empathy, and focus). Can understand sentences and frequently used expressions related to
	transactional domain (such as very basic personal and family information, shopping, local
A2 •	

	geography, and employment).
	 Can communicate routine tasks requiring a simple and direct exchange of information on familiar and routine matters using simple sentence structures.
	 Can describe in simple terms aspects of his/her background, immediate environment, and matters in areas of immediate need.
	• Can use some simple structures accurately but continues to exhibit basic systematically
	errors (e.g., verbs tenses, use of prepositions, and articles).
Basic User	EXTENSION OF THE CEFR STANDARDS - INTEGRATION OF LANGUAGE ABILITIES
Dasic User	• Can use A2 level, grade level and age appropriate linguistic (e.g. past verb forms), socio-
	cognitive (e.g., grouping strategies) and socio-affective (e.g., cooperating or questioning for
	clarification strategies) resources to integrate topical content from oral and written text to
	perfom a goal-oriented product (mini-project) based on an integrated sequence of activities
	within a domain, scenario, and theme. Linguistic resources include grammatical forms and
	meanings; socio-cognitive resources include a range of meta-cognitive strategies
	(monitoring) and cognitive strategies (resourcing); and socio-affective resources consist of strategies such as cooperating and coping.
	• Can use A2 level, grade level and age appropriate digital and telecommunication resources
	to research, plan, and implement the mini-project.
	 Can give, receive, and respond to feedback at critical stages of the creative process.
	Can use level and age appropriate linguistic resources to integrate information from a reading
	or a listening input or other inputs to perform from one skill modality to another (e.g.,
	listening to speak, read to write) to achieve the goal of the scenario.
	• Can display awareness and development of non-cognitive dispositions (such as effort,
	perseverance, engagement, empathy, and focus).

Table 2 Costa Rican general descriptors according to CEFR English proficiency bands for Third Cycle and Diversified Education

	1	
		 Can understand and use familiar everyday expressions and very basic phrases aimed at the satisfaction of needs of a concrete type. Can introduce him/herself and others and can ask and answer questions about personal details
		such as where he/she lives, people he/she knows and things he/she has.
		 Can interact in a simple way provided the other person talks slowly and clearly and is prepared
		• Can interact in a simple way provided the other person taiks slowly and cleany and is prepared to help.
		• Can show limited ability to use simple grammatical structures and conventioins such as punctuation, and capitalization.
		EXTENSION OF THE CEFR STANDARDS - INTEGRATION OF LANGUAGE ABILITIES
	A1	 Can use A1 level, grade level and age appropriate linguistic (e.g. present verb forms), socio-cognitive (e.g., associating strategies) and socio-affective (e.g., cooperating or coping strategies) resources to integrate topical content from oral and written text to perfom a goal-oriented product (mini-project) based on an integrated sequence of activities within a domain, scenario and theme. Linguistic resources include grammatical forms and meanings; socio-cognitive resources include a range of meta-cognitive strategies (planning) and cognitive strategies (revising); and socio-affective resources consist of strategies such as cooperating and coping.
		• Can use A1 level, grade level and age appropriate digital and telecommunication resources to research, plan, and implement the mini-project.
Basic User		 Can give, receive, and respond to feedback at critical stages of the creative process.
		• Can use level and age appropriate linguistic resources to integrate information from a reading or a listening or other inputs to perform from one skill modality to another (e.g., listening to speak, read to write) to achieve the goal of the scenario.
		• Can display awareness and development of non-cognitive dispositions (such as effort, perseverance, engagement, empathy, and focus).
		• Can understand sentences and frequently used expressions related to areas of most immediate relevance (e.g., very basic personal and family information, shopping, local geography,
	A2	employment).
	/ 2	 Can communicate in simple and routine tasks requiring a simple and direct exchange of

		 information on familiar and routine matters. Can describe in simple terms aspects of his/her background, immediate environment, and matters in areas of immediate need. Can use some simple structures accurately but continues to systematically exhibit basic errors (such as verbs tenses, use of prepositions, articles).
Basic User	A2	 EXTENSION OF THE CEFR STANDARDS- INTEGRATION OF LANGUAGE ABILITIES Can use A2 level, grade level and age appropriate linguistic (e.g. past verb forms), socio-cognitive (e.g., grouping strategies) and socio-affective (e.g., cooperating or questioning for clarification strategies) resources to integrate topical content from oral and written text to perfom a goal-oriented product (mini-project) based on an integrated sequence of activities within a domain, scenario and theme. Linguistic resources include grammatical forms and meanings; socio-cognitive resources include a range of meta-cognitive strategies (monitoring) and cognitive strategies (resourcing); and socio-affective resources consist of strategies such as cooperating and coping. Can use A2 level, grade level and age appropriate digital and telecommunication resources to research, plan, and implement the mini-project. Can use level and age appropriate linguistic resources to integrate information from a reading or a listening input or other inputs to perform from one skill modality to another (e.g., listening to speak, read to write) to achieve the goal of the scenario. Can display awareness and development of non-cognitive dispositions (such as effort, perseverance, engagement, empathy, and focus).
Independent User	B1	 Can understand the main points of clear standard input on familiar matters regularly encountered in work, school, and leisurelike a radio or TV program when the delivery is relatively slow and clear. Can understand texts that consist mainly of high frequency everyday or job-related language. Can understand the description of events, feelings, and wishes in personal letters. Can deal with most situations likely to arise while travelling in an area where the language is spoken. Can enter unprepared into conversation on topics that are familiar, of personal interest, or

II. WHY A NEW ENGLISH CURRICULUM?

The English curriculum reform responds to four main concerns:

First of all, learners need an updated curriculum that reflects the knowledge, skills, and abilities needed to communicate in a range of language use contexts and to succeed in the information age as 21st century learners. The needs analysis (Informe de Diagnóstico: Programas de Estudio de Inglés para Preescolar, Primaria y Secundaria, 2015) that informed this reform suggested that some of the target contents of preschool, elementary and secondary school's curriculum had lost pertinence as manifested by anecdotal reports collected from teachers and students. Secondly, learners who receive English lessons in elementary and high schools are not reaching the expected English proficiency levels after eleven or twelve years of instruction. Among other things, these shortcomings could be attributed to the fact that the current curriculum fails to specify the English language proficiency level that students are expected to attain at the end of each cycle and to the fact that the assessments in both classroom and standardized testing contexts are not systematically aligned with curriculum and instruction. Thirdly, for citizens to communicate effectively in the global context and to face the

challenges of an interconnected world, they need to possess a number of competences. Purpura (2016) summarized these competences as follows:

> Over the years, the geopolitical and technological forces in the workplace have increased the knowledge, skills, and abilities (KSAs) that people need to perform their jobs. We are now asked to read, listen, and synthesize large amounts of information from several sources via multiple modalities; search for information, judge its accuracy, and evaluate its applicability; and use communication technologies to collaborate in teams whose members represent a diverse global community (National Research Council, 1999, 2001). Importantly, many of us are asked to do this in a second, foreign, or heritage language (L2), requiring competencies for communicating ideas and establishing relationships in culturally respectful ways (p. 190).

In addition, he stated that:

To succeed in this environment, L2 users must demonstrate that they have the skills needed to process information, reason from evidence, make decisions, solve problems, self-regulate, collaborate, and learn – and they need to do this in their L2 (p. 190).

This view is in line with the concept of education for a new citizenship that maintains that 21st century learners must integrate proactively in a globalized world while strengthening their national and global identity.

The new Curriculum within the framework of Education for a New Citizenship

Education for a new citizenship envisions learners as active agents of change able to:

- Use knowledge, skills, and abilities beyond school contexts.
- Express their own points of view.
- Practice peaceful conflict resolution and search for democratic solutions.
- Harmonize social and economic development and environmental sustainability.
- Take action in favor of sustainability of local, national and global resources.
- Be aware of a global world where national borders have become more diffused.
- Use ICTs and access to knowledge networks as tools for communication, innovation, and proactive social service.
- Reflect and use critical thinking processes.
- Be compassionate national and global citizens.
- Practice democratic principles such as freedom of expression and religion, respect for plurality and

cultural diversity (sexual, linguistic, and ethnic) as stated in the Costa Rican Constitution.

 Defend and protect Human Rights and be against all forms of discrimination.

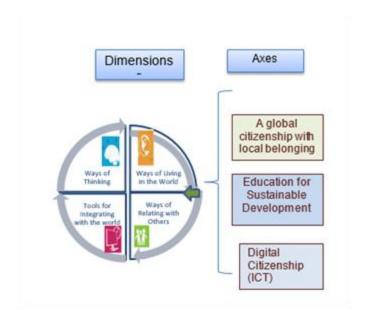

As the chart below shows, the concept of New Citizenship is sustained by three main pillars:

Sustainable Development: The concept of "sustainable development" manifests the explicit desire for a new relationship between human beings and all forms of life in general with the environment. It seeks to harmonize social and economic development considering the availability of sustainable resources to each nation, region, country and the planet. It recognizes that resources are finite, and we are part of a single planet, which requires promoting healthy and environmentally-friendly lifestyles.

Digital Citizenship: Digital citizenship implies an understanding of human, cultural, and social issues related to the use of information and communication technologies (ICTs). It supports the implementation of relevant KSAs for understanding the principles that guide: ethics, legality, safety, and accountability in the use of the internet, social networks and technologies available.

Global Citizenship: The concept of global citizenship is related to the growing interdependence and interconnectedness of people and places thanks to advances made by information and communication technologies, which enable connection and immediate interaction between people around the world. The interrelation among these pillars is shown in Figure 2.

Finally, the findings from the needs assessment (Informe de Diagnostico de los Programas de Estudio de Inglés, 2015)

applied to a sample of stakeholders including English Advisors, other language specialists (e.g., university professors, school teachers) and students revealed a need for:

- Better articulation of learning objectives, contents and assessments across the cycles.
- * More coherence among the curricular elements.
- * Improved clarity of the learning objectives.
- * More detailed specification of pedagogical mediation.
- The incorporation of Information and Communication
 Technologies in the learning environment.
- * Reduction of the number of units in the curriculum.
- * More learning resources for teachers and students.
- * Reconceptualization of assessment practices in both classroom and national contexts.
- * Alignment of assessments with learning, instruction, and the curriculum.
- Establishing explicit criteria (e.g, language content knowledge, pedagogical content knowledge, assessment literacy, and digital literacy) for hiring and retaining English language instructors.
- The English class primarily delivered in the target language.

 Strengthening communication and coordination with universities in relation to teacher formation and teacher training.

To this end, the administration has worked in collaboration with stakeholders to propose a complete reform of the program of study.

III. LEGAL FOUNDATION

The English curriculum is founded on a legal framework that includes the 1949 National Constitution, clauses 76 to 89, which relate to education and culture and states the fundamental values contemplated in the Constitution. The Basic Education Law, Article 2, establishes the aspirations of the Costa Rican government, in terms of civic education, with a humanistic philosophy and the purposes of Costa Rican Education, which are detailed below:

a) To educate citizens who love their country, are aware of their rights and their fundamental freedoms, and have a deep sense of responsibility and respect for human dignity.

b) To contribute to the full development of the human personality.

c) To prepare citizens for a democracy in which individual interests are reconciled with those of the community.

d) To encourage the development of solidarity and human understanding.

e) To preserve and expand our cultural heritage by imparting knowledge about the history of man, great works of literature, and fundamental philosophical concepts.

Similarly, the educational policy for the 21st century highlights the importance of strengthening Costa Rica's democratic tradition by developing citizens with leadership skills, a critical mind, and a strong sense of cultural identity. Some basic principles of the policy are the following:

- 1. Learners should be able to reach their full potential and contribute to the development of the country.
- 2. Learners should be able to interact with people from other cultures respecting their own values and the values of others.
- Education should contribute to sustainability in production and economy in order to increase productivity and improve the country's competitiveness.

This educational policy, *the school as the core of the quality of Costa Rican education*, recognizes and reinforces the need of assuring learners of a quality education by paying attention to their personal characteristics, their needs and aspirations, and their learning styles. It also acknowledges their cultural, ethic, social, economic backgrounds, talents, abilities, and religious beliefs so that learning becomes meaningful and pertinent.

It recognizes three dimensions of learning: learning to know, learning to do, learning to be and to live in a global society as fundamental for a complete education.

Therefore, schools will provide learners with opportunities for harmonious living and active participation in the solution of problems in a collaborative way.

UNESCO, in the document "Education in a Multilingual World," acknowledges that learning other languages provides new ways of interpreting the world and gives access to a new value system encouraging inter-cultural understanding and helping reduce xenophobia. In addition, the National Development Plan "Alberto Cañas Escalante" highlights the importance of increasing economic growth and creating quality jobs as a way to reduce poverty and inequality. Speaking English fluently is a skill that learners undoubtedly must develop to achieve this aspiration. Therefore, the educational policies in the framework of Education for a New Citizenship are aimed to provide learners with an education for life that encourages creative innovation and multilingualism to enhance human development with equity and sustainability in the context of quality schools.

Education for a New Citizenship envisions schools as places of opportunity for students, in terms of equity, diversity, relevance and quality of education (as mandated in the Law 7600, which provides the legal foundation for the fulfillment of the students with special needs` rights as human beings).

IV. PHILOSOPHICAL FOUNDATIONS

The education reform is nurtured by three philosophical trends stated in the Educational Policy "Towards the 21st Century" -- humanism, rationalism and constructivism -- in accordance with the concept of the integral perspective of the human being.

A) Rationalism: Rationalism promotes the development of complex, challenging, creative and critical thinking skills, in order to face the multidimensional perspective of problems with the support of cooperative learning and pedagogical scaffolding.

- **B)** Humanism: Searches for the full realization of the human being, as a person, endowed with dignity and values for the common will.
- **C) Constructivism:** The learner constructs and reconstructs understanding and learnings based on prior knowledge from his/her life and in exchange with others.

Language Learning Considerations

Philosophical considerations

These curricular considerations see the learner as a social agent at the center of the curriculum who is active, independent, critical, reflective, creative, innovative, inquisitive, and respectful of human rights and socially committed to their community, country, and the world. To achieve this aspiration, the learning environments and experiences promote dialogue and the search for creative responses and solutions to real-life problems.

Psychological considerations

These take into account the whole development of the person and is associated with affective dispositions that influence language learning such as self-reflection, engagement, effort, perserverence, self-esteem, self-perception, and sensitivity toward others. The pedagogical mediation values individual pathways toward learning. It is substantive, flexible, inclusive, and culturally relevant, respecting the individual differences and learning potential of all students. The learning environment promotes democratic principles of agency.

Neurological considerations

These are related to the brain's architecture and how maturational processes influence language development. Research evidence (Jacobs & Schumann, 1992) shows that as the human brain matures some functions are assigned or lateralized to the left hemisphere or right hemisphere of the brain. Language functions are controlled mainly by the left hemisphere. The process of lateralization begins at the age of 2 and ends around puberty. During this time, the brain is neurologically assigning functions little by little to one side of the brain or the other. The plasticity of the brain at young ages enables children to acquire fluent control of a first and second language. This is why it is important to start learning foreign languages early in life.

Sociocognitive considerations

These are related to the brain's architecture (attention, short-, working- and long-term memory) and how it functions to process information (metacognition) related to learning and communication. With respect to the brain's architecture, the new curriculum needs to be sensitive, for example, to the attention span of learners, the capacity of the brain to process information given the limitations of working memory, the complexity and cognitive load of tasks presented to students. In terms of the brain's functionality, the new curriculum needs to take stock of how learners process information (e.g., auditory processing, and simultaneous processing) and retrieve it from long-term memory in order to generate responses in relation to tasks. This involves a range of strategies including (meta) cognitive meta (affective), meta (interactional) strategies (Oxford, 2010; Purpura, 2014) in task completion. These considerations are critical factors in how teachers need to design pedagogical and assessment tasks.

According to research (Brown, 1993) human cognition has its greatest development through the first 16 years of life. This factor is critical in the process of language development and second language acquisition. According to Ausubel (1964), adults will benefit more from explicit teaching of grammatical forms and deductive thinking than children will. Young learners learn better from inductive teaching and experiential learning as it happens in their natural process of first language acquisition. Of course, this depends as well on contextual factors, resources available and the meaningfulness of the pedagocical mediation. Another important aspect is that learning to be meaningful has to be connected to existing knowledge and experience.

Socio-cultural considerations

These principles stress the importance of valuing and respecting the uniqueness of each existing culture at local, national, and global levels. It includes the notions of diversity, interdependence, and interconnection among others. It involves analyzing the complexity of times, societies, communities and families, where different dynamics and cultural values coexist. The students in their interactions learn new behaviors, values, and social skills in line with a human rights approach and through democratic participation.

Core considerations

In the last decades, globalization has restructured the world as a unique space with a new social-cultural and economic order with complex interrelations and interdependencies. As a result, The United Nations Educational, Scientific, and Cultural Organization (UNESCO), in 1996, presented the Delors report, written by the Education Commission for the 21st Century. This document constitutes a philosophical framework to guide new curricular reforms in Latin America and the Caribbean, as a key tool for promoting social, economic and cultural changes within a global perspective and sustained in three main pillars of learning:

- Learning to know: The learner acquires knowledge on how to live with dignity and contribute to society. It fosters the development of cognitive capacities such as memory, imagination, problem solving and the ability to think in a coherent and critical way.
- Learning to do: This learning implies application of knowledge into practice. Learning to do thus shows a shift from skill to competence. This shift involves the ability to communicate effectively with others and promotes an aptitude toward teamwork and social skills.
- Learning to be and to live in community: This pillar of learning implies a curriculum, which aims at the development of the whole person by cultivating

qualities of empathy, imagination, and creativity, and guiding students in acquiring universally shared human values beyond the school. This learning implies the development of such qualities as: knowledge and understanding of self and others; appreciation of the diversity of the human race, and an awareness of the similarities between; and the interdependence of all humans.

V. PEDAGOGICAL CONCEPTUALIZATION

The English curriculum is permeated by the principles and understandings of the following theoretical and pedagogical frameworks.

The Socio-Constructivist Approach

The socio-constructivism approach perceives the learner as a responsible member of a world community and views teachers as social engineers.

The design of the syllabus adopts the socio-constructivist theory of learning, encouraging active learner's participation, interaction, and its adaptation to the context. Ten principles of social constructivism are summarized as follows (Pérez, 2002):

23

- 1. Construction and reconstruction of knowledge is a continuing process, progressive, and never-ending.
- 2. People learn in meaningful ways.
- 3. Learners learn better in collaborative environments and exchanges.
- 4. People learn progressively at different stages of life.
- 5. The learner's mental and motor activity are both fundamental to creating long-term meaningful learning.
- 6. Prior experiences facilitate or inhibit the acquisition of new learning.
- 7. Mind and language development are influenced by the historical and socio-cultural context.
- 8. The appropritiation of new knowledge implies a break from prior knowledge; therefore, cognitive conflict must be addressed and overcome.
- 9. Educational content must be treated in three dimensions: concept, procedure and attitude.
- **10.** Application of meaningful learning is fundamental for longlasting learning.

Holism conceives reality as a set of systems, a mixture of chaos and order where uncertainty is greater than the known reality. There is a network of connections; everything is affected and interdependent.

Consequently, the holistic vision is centered in universal principles of the human condition. All educational agents accept and respect themselves. They are aware of the unity as well as diversity.

The learner moves from a fragmented world vision to an integral one, where everything and everyone are interconnected and interdependent.

Furthermore, under this perception, the learner becomes aware of his/ her capacity to transcend his/her own will, ego, physical, mind and emotional limits in his/her search to connect with a superior spiritual wisdom. This allows the construction of values, concepts and traditions for developing a life with meaning and sense.

Consequently, the holistic vision is centered in universal principles of the human condition. All educational agents accept and respect themselves. They are aware of uniqueness as well as diversity.

Holism

The learner moves from a fragmented world vision to an integral one, where everything and everyone are interconnected and interdependent.

Critical Pedagogy

The critical pedagogy emphasizes the political dimension of teaching whereby learners become producers of knowledge, not just consumers. They are subjects of their own learning process.

Moreover, this teaching pedagogy promotes questioning and inquiry of the learner's own beliefs and social, political, and economic realities by means of facing different life "dilemmas".

This liberating education destroys the division between teacher-student, as the dialogue between them is essential for education. Thus, the role of the teacher is to enhance dialogue, debates, collaborative work and help learners question their realities.

By contrast, the role of the teacher in "banking education" (which is characterized by the filling of students' minds as though they were empty vessels) is that of informationprovider and does not focus on empowering the students as agents of their own learning. In problematizing education, educators and students educate each other; one learns from the other. The educator is prepared and then establishes a more balanced relationship with his students. Learners are now critical of what dialogue with the educator is. (Freiré, 2002)

VI. ENGLISHAS AN OBJECT OF STUDY

The purpose of studying English in the Educational System is the development of the learner's communicative competence as well as the knowledge, skills, abilities, values, and competences of a 21st century citizen. This requires the implementation of innovative communicative language teaching methodologies. These methodologies are supported by principles established in the Common European Framework of Reference for languages (CEFR), the Action-Oriented Approach, and the Educating for a New Citizenship Framework.

VII. PEDAGOGICAL APPROACH

The Common European Framework of Reference for Languages in the Costa Rican Context

The CEFR for Languages is used in the English curricular reform as a reference for the following considerations:

It provides a common basis for the development of

language syllabi, curriculum guidelines, textbooks, and

It describes what language learners do at different levels of

It defines 6 reference levels of proficiency, defined by

means of appropriate "Can Do" performance descriptors to

proficiency within particular domains and scenarios.

assessment.

•

٠

٠

The CEFR defines communication as a social act, where learners are social agents, developing a range of general and specific communicative language competences, moving from learning about the language to learning to communicate in the language in active, spontaneous, and authentic language interaction. Most of the tasks to be accomplished have a meaningful communication objective, for example, solving a problem in a given scenario. The CEFR defines competences as "the sum of knowledge, skills and characteristics that allow a person to perform actions in society." (p.9). They are comprised of general and specific competences as shown in the following charts. General competences consist of knowledge, skills, and abilities to learn and existential competence that are not language- specific but learners use them when performing all kinds of actions including language activities.

Three language-specific competences are called upon by the learner when performing language tasks: linguistic, sociolinguistic and pragmatic. (See the following tables.)

General Competences			
Declarative	Skills and	Existential	Ability to
Knowledge	know-How	knowledge	Learn
Resulting from empirical and and formal knowledge	Ability to carry out metacognitive procedures accompanied by forms and existencial competence	Culture related factors (willingness to engage with other people in social interaction)	Language & Communication Awareness General Phonetic Awareness & Skills
Knowledge of the World Sociocultural Knowledge Intercultural Awareness	Practical Skills Intercultural Skills	Attitudes Motivations Values Beliefs Cognitive Styles Personality Factors Self-image	Study skills Heuristic Skills

Table 4 General Competences

Table 5 Specific Competences

Specific competences

Semantic	Expressions of Folk Functional		
Phonological Wisdom Competence			
Orthographic Register Differences			
	Dialect & Accent		

Adapted from Piccardo, Berchoud, Cignatta, Mentz, Pamula, 2011, p. 35

The communicative language competences involve knowledge, skills, and know-how for each of the following three components:

- Linguistic component: Deals with the knowledge of phonology, morphology, lexicon and syntax.
- Sociolinguistic component: Refers to the sociocultural conditions of language use such as social group repertoires or politeness rules.
- Pragmatic component: Covers, among others, speaker's and receptor's attitudes and beliefs, their understanding of the context of an utterance and the functional use of language; for example the use in specific scenarios of how to act in a given social event or how to participate in a job interview.

The following table describes the proficiency performance descriptors that have been used as reference in the curriculum for each of the levels A1, A2, B1, and B2 according to the CEFR.

Table 6 Common References Levels: Global Scale

Source: Common European Framework of Reference for languages, 2001.

	B2	 Can understand the main idea of complex text on both concrete and abstract topics, including tecnichal discussion in his/her field of specialization. Can interact with a degree of fluency and spontaneity that makes regular interaction with native speakers quite possible without strain for either party. Can produce clear, detailed text on a wide range of subjects and explain a view point on a topical issue giving the advantages and disadvantages of various options.
Independent User	B1	 Can understand the main points of clear standard input on familiar matters regularly encountered in work, school, leisure, etc. Can deal with most situations likely to arise while travelling in an area where the language is spoken. Can produce simple connected text on topics, which are familiar, or of personal interest. Can describe experiences and events, dreams, hopes and ambitions and briefly give reasons and explanations for opinions and plans.
A2 Basic User		 Can understand sentences and frequently used expressions related to areas of most immediate relevance (e.g., very basic personal and family information, shopping, local geography, employment). Can communicate in simple and routine tasks requiring a simple and direct exchange of information on familiar and routine matters. Can describe in simple terms aspects of his/her background, immediate environment, and matters in areas of immediate need.
	A1	 Can understand and use familiar everyday expressions and very basic phrases aimed at the satisfaction of needs of a concrete type. Can introduce him/herself and others and can ask and answer questions about personal details such as where he/she lives, people he/she knows and things he/she has. Can interact in a simple way, provided the other person talks slowly and clearly and is prepared to help.

The Action-Oriented Approach

This curriculum adopts the Action-Oriented Approach or the Task-based Approach, (Samuda & Bygate, 2008) one of the latest communicative language methodologies which places emphasis on what learners know and do to communicate successfully by completing tasks, using general and specific competences in meaningful context and real-life scenarios. There is a progressive shift from the Communicative Approach to the Action-Oriented Approach. The curriculum maintains an eclectic view, but favors the Action-Oriented Approach among the other pegagogical views.

An Action-Oriented Approach sees students as active agents responsible for their own progress in learning and sees communication as a social activity designed to accomplish specific tasks.

Within this approach to English language learning, students develop communicative competence, gain knowledge of various English cultures, and develop their full potential as national and global citizens.

In order to develop effective English lessons using the Action-Oriented Approach, teachers consider some basic principles:

- 1. The students are social agents that use the target language to perform specific actions in real life contexts meaningfully.
- 2. Language performances, in oral or written form, respond to language functions and are carried out in specific scenarios.
- 3. Enabling and communicative activities are taskbased and real-life.
- 4. Learners use authentic materials as comprehensible input, as much as possible.
- 5. The ICT become an important tool to create meaningful learning experiences.
- A great degree of autonomy is placed on the learner; therefore, the teacher works in the development of learners' meta-cognitive, meta-affective, and metasocial strategies.
- 7. Intercultural awareness plays an important role for getting meaning across and facilitating communication among cultures.
- 8. Vocabulary, syntax, cohesive forms, and phonology are taught with the purpose of facilitating communication.

Picardo (2014), a leading expert on the Action-Oriented Approach emphasizes that grammar is taught, but it is only "one component of communicative competence." She acknowledges, "the rules and structures of grammar and vocabulary are *necessary, yet insufficient* condition for communication," and emphasizes that in order to communicate effectively, "one must know not only how a language works, but also what parts of the language to use and when. These vary depending on the situation, the context, the listener, and the communication intention." (p.12)

The Role of Tasks

Tasks can be non-comunicative or communicative language activities that make demands upon the learner's knowledge, skills, and abilitiies.

They are defined as any purposeful action considered by an individual as necessary in order to achieve a given result in the context of a problem to be solved, an obligation to fulfill, or an objective to be achieved (CEFR,10). Tasks are set in a context that learners would face in everyday life within scenarios and domains. Learners are able to demonstrate what they "can do" in English, as well as what they know about English language structures, vocabulary, functions, psycho-social and socio-cultural aspects.

Some examples are writing a class newspaper, obtaining certain conditions in the negotiation of a contract, playing a game of cards, and ordering a meal in a restaurant. The action-oriented task seeks to break down the walls of the classroom and connect it with the outside world.

In the communicative vision, shaped in the 1980s and 1990s, the task was seen as class work, with an emphasis on content rather than form (Nunan, 2004). This view has been redefined so that a learning task makes it possible to structure learning around moments, actions, and products that are vivid, defined, and concrete. The learner is not speaking or writing for the teacher or pretending to speak or write to another person, but rather speaking or writing in a real life context for a social purpose.

Tasks in the Action-Oriented Approach often involve the creation of a product as the students perform the task. This product may be a brochure for tourists, a blog entry, or a fund raising project for a humanitarian cause. "However, not only the specific outcome, but also the process, which leads to the final result, is important for communication in the language classroom: this involves a step-by-step organisation, learners' activation of strategies and competences, consideration of the

setting and social forms, as well as materials and support"

Project-Based Learning

Project work is an important element in a task or actionoriented approach because it is a learner-centered, processoriented, and collaborative task. It offers students the opportunity to take responsibility for their learning, set their own learning objectives, go step-by-step and demonstrate what has been learned by creating an end product. Additionally, projects allow students to be in contact with authentic language and learning experiences that go beyond the classroom setting. Another benefit of project work is that it brings together mixed ability learners in which each individual contributes according to his or her different talents and creativity (Fried-Booth, 2002).

Pedagogic Use of Technologies

Since education is not a static process; likewise, educational technology updates and re-generates to cope with all the changes and demands of a globalized world. The use of technology in English teaching goes back to the 1960's. Since that time, technology and education keeps evolving in parallel. As Dudeney and Hockly state, "...younger learners are growing up with technology, and (Picardo et al., 2011, p. 39).

it is a natural and integrated part of their lives" (2008). For that reason, its implementation and maximization in the English class becomes essential in today's learning environment, demanding that *teachers are prepared to suffice the needs* of the students in this context. The internet as one resource of technology is a valuable tool for providing students with real input for listening and reading tasks such as podcasts, radio broadcasts, online television, movies, songs and the like.Internet and mobile phones can also be combined to create real exchanges for listening and speaking activities.

Teacher's Role

The teacher is a facilitator and helps the learner to become autonomous. S/he takes several roles such as coach, resource person, advisor, organizer, and facilitator for the learner's successful completion of the task. Table 7 describes in detail the English teacher's profile required to develop the new curriculum and enhance education for a new citizenship, based on the three learning pillars: learn to know, learn to do and learn to be and live in a community.

Table 7 Teacher Profile			
Types of knowledge	Learn to know	Learn to do	Learn to be and live in community
	What the teacher needs to know	What the teacher needs to do	How the teacher needs to be
Orientations to	Teacher	Teacher	Teacher
A Global Citizenship with Local Belonging	 is certified with B2/C1 English language proficiency is knowledgeable about Costa Rican educational policies, curriculum and assessment frameworks and guidelines. is well informed about local and global issues. is knowledgeable about updated English language theories and methodologies. develops action research practices to improve teaching practices. 	 promotes ownership of cultural belonging and intercultural representations. implements cognitive, affective and metacognitive strategies in the teaching and learning processes considering learner's styles preferences. implements diverse and relevant methodologies and ICT as tools to empower learning and action research. 	 is aware and sensitive about local and global issues and learners' affective and socio-cultural needs. promotes learner's high expectations with inclusive and positive classroom environments. supports critical and creative thinking processes beyond the class. promotes qualities for developing the new citizenship principles. promotes learner's family participation in the learning process. reflects on ethical teaching practices and assessment to respond to learners needs.
Education for Sustainable Development	 knows about the implications of human actions over the environment. 	 participates, together with staff, in school community projects related to education for sustainable development and others. practices eco-friendly actions. promotes collective and individual environmental care practices. 	• is aware of human action over the planet and the role of education as preventive element to mitigate effects.
New Digital Citizenship	 is knowledgeable about basic ICT to favor the implementation of didactic units. 	 applies new ICT in the teaching and learning process. supports innovation and creativity. develops a constructive mediation based on dialogue, collaborative environments, interdisciplinary connections and the use of ICTs . 	 is aware of the benefits of ICT as supportive tools. promotes learner's autonomy, ethical and social responsible use of ICT.

Learner's Role

An Action-Oriented Approach "views users and learners of a language primarily as 'social agents', i.e. members of society who have tasks (not exclusively language-related) to accomplish in a given set of circumstances, in a specific environment and within a particular field of action" (CEFR, p.9). The learner/social agent is not an empty vessel but a whole person with values, beliefs, an identity, and a language or languages. S/he possesses knowledge and experience that can be used to face the challenge of learning a language. This prior knowledge and experience provide points of reference and categories for organizing new learning. The acquisition and refinement of competences is a continuous process, both at school and in the world beyond the school (Piccardo, 2014). The following image illustrates the integration of the elements that make up the pedagogical model as it is presented in the English Curriculum and its ultimate goal -- the learner's development of English communicative competence and integral growth. Some of these elements are described in more detail in the explanation of the unit template.

The Communicative Approach (CA) and the Action-Oriented Approach (AOA) are different, but yet complementary perspectives for the didactic processes in the English class. The following chart is adapted and cited by Chistian Puren (2014) in his article "Enfoque comunicarivo versus perspectiva orientada a la acción social" (2014) compares the different characteristics of both.

Table 8 Comparison of Actions

Communicative Approach (CA) vs. Action-Oriented Approach (AOA)

СА	AOA
Actions	Actions
focus on the objectives and as means. Actions are limited to receive and reproduce information (acts of speech).	are meant to be for further actions, broader social repetitive acts (scenarios) for treatment of information.
are part of simpler tasks.	are more complex treatment of tasks or part of integrated mini projects.
are delivered since the beginning of the units.	(the majority of them) are repetitive along a week, months, or years.
are finished completely at the end of the tasks.	are open-ended. They cover more ample periods of time to develop lifelong skills or can be retaken later on.
usually last for a shorter time and are limited to a defined text, topic and time of interaction.	have certain period of time, or, at least, are subscribed within a certain timeframe.
are exchanges between a minimum group (such as pair- share/small groups).	are performed collectively.
	integrate both competences: co-linguistic and co-cultural dimensions in the common action.

Table 9 compares the main charateristics of the Communicative Approach and the Action-Oriented Approach.

	Communicative Approach	Action-Oriented Approach
Learner´s Role	 Responsible for his/her own learning. Central, active, creative and participative. Individual/collective roles. Confident, motivated. Develops full potential and builds on interests. 	 An agent/performer with intercultural awareness skills. Autonomous, works cooperatively, interacts with others, investigates and solves problems using the tools at his/her disposal (general and specific competences). Develops metacognitive, reflective and critical thinking strategies for successful completion of the task.
Teacher´s Role	 Facilitator, guide. Participates in process with learners. Takes more time for individual needs. Gains skills and takes responsibility from planners, writers, linguists. Shows expert role. 	 Facilitator, coach, resource person, guide, advisor, and observer. Helps the learner become autonomous and be successful in the completion of the task. Provides effective feedback in the process of learning. Shows expert role, but shares this responsibility with the learner.
Learning Resources	 Authentic, real-world significance. Related to learners' needs, interests and culture. Flexible. Motivating and interesting. 	 Oral or written authentic texts: business cards, bus tickets, newspaper articles, book excerpts, wikis, bus schedules, city maps, bulletin boards, voice messages, and announcements. Appropriate to the learner's needs and competence level. Intercultural perspective
Aims of communicative activities/tasks	 Communicative activities and tasks serve communication. The goal is communication. 	 Communicative activities become actions that the learner/social agent performs in order to build up general competences and communicative language competences. The goal is successful action and accomplishment of tasks in a particular scenario and domain aligned to the learner's life experience and personality.
Learning Environment	 Real-world context. Beyond class room, into community. Relevant, stimulating, interesting. 	 Real-world contexts (personal, public, educational and vocational domain) collaborative, stimulating, mediated by ICTs.
Assessment	 Communicative competence. Process-oriented. Continuous. Profiling skills. Learning process. Self and peer assessment. 	 Assessment is based on what the social agent is able to do in real-life situations or scenarios and the process he/she requires to develop the competences. Authentic asessement is favored. The acquisition and refinement of general and communicative competences is a continuous process, both at school and in the world beyond the school.

Table 9 Communicative Approach vs. Action-Oriented Approach Comparative Chart

Mediation of Learning

A shift from communicative to action-oriented language teaching requires the design and implementation of concrete, meaningful and relevant real-life situations for students to demonstrate their English language abilities through tasks. This envisions the English classroom as a social, collaborative, action-oriented linguistic environment. (Perrot, 2010).

Tasks are a key feature in the mediation of learning. Task accomplishment by an individual involves the strategic activation of specific linguistic competences (linguistic, pragmatic and socio-linguistic) along with a range of socio-cognitive comptences in order to carry out a set of purposeful actions in a particular domain (interpersonal, transactional, academic and profesional) with a clearly defined goal and a specific outcome. Tasks can be extremely varied in nature and may involve language activities, to a greater or lesser extent, for example: *creative* (painting, story writing), *skills based* (repairing or assembling something), *problem solving* (jigsaw, crossword), *routine transactions* (interpreting a role in a play, taking part in a discussion, giving a presentation, planning a course of action, reading and replying to an e-mail message, etc.) A task may be quite simple or extremely complex (e.g.,

studying a number of related diagrams and instructions and assembling an unfamiliar and intricate apparatus). A particular task may involve a greater or lesser number of steps or embedded sub-tasks and consequently the boundaries of any one task may be difficult to define (CEFR, p. 157).

Most of the tasks performed involve some sort of text, and all texts have the purpose of performing (and enabling us to perform) tasks. Examples of texts in everyday life include bus schedules, city maps, bulletin boards, voice messages, and announcements over a personal announcement system. Planning a task provides an opportunity to think about these different types of texts and their linguistic and cultural characteristics. (Piccardo, p.30 2014) Tasks, as with any activity in real life, require reading or speaking as a means of achieving a specific goal other than (or in addition to) a language goal.

The CEFR emphasizes the social nature of actions. Tasks sometimes require different levels of co-operation with others (other users or learners). In performing even the most solitary task, a user/learner must consult materials produced by other individuals, and this task will generally have an impact beyond the user/learner performing it.

General Mediation Principles from Preschool to First and Second Cycles

- English language teaching first places priority on oral comprehension while simultaneously exposing students to concepts of print. Reading and writing will be introduced progressively.
- Lessons can follow a task-based sequence that will focus on linguistic and nonlinguistics items such as: phonemic awareness, language forms, vocabulary, oral or written comprehension and oral or written production, development of cognitive or socio-affective strategies, etc.
- The teacher will prepare tasks for students to develop their communicative competence. One of these tasks takes the form of a mini-project at the end of each unit. For example, writing a class book based on a story with each student producing one page of the book with drawings and sentence frames. Students` products can begin with a simple drawing and a label written by the teacher. Over time, the student can orally dictate and then later write one word to fill-in the sentence frame.
- During the Second Cycle, students are exposed to more complex tasks that gradually demand them to produce longer chunks of language in oral and written

form within sentence frames until they begin to write more words and sentences on their own. They can also engage in the writing process, revising, editing, and finally producing polished texts on their own.

- Teachers can select three or four goals per week from the units. They can combine oral or written comprehension goals with oral and written production ones, depending on the stage of the lesson, so that an integrated skills approach is developed.
- Teachers can take one lesson per week for phonemic awareness development when it is possible.
- Teachers start each theme and class with a warm-up activity, which is part of the preteaching phase. After that, he/she introduces the sentence frames, vocabulary, sounds or sociocultural aspects of the unit, which are the focus of the lesson. Then, teacher shares the learning goals and essential question with the students for that day or week.
- The enduring understanding and essential question are central to articulate the three learnings: learn to know, learn to do and learn to be and live in community. The mini-project is an opportunity for students to integrate these three learnings and linguistic skills in a single task.

- The enduring understanding is shared by the teacher at the beginning of each unit to connect students with the core ideas that have lasting value beyond the classroom.
- Teachers facilitate pre-task activities for activation of students' prior knowledge to carry out a specific task, placing emphasis on the forms, sounds and vocabulary words needed by repeating, rephrasing, writing on the board or drawing.
- Pre-task activities in listening, reading, speaking and writing are developed to help students recall, internalize and pronounce useful words and phrases demanded by the task that they will perform. In first grade, tasks can be very simple to let children adjust linguistically, socially, and cognitively to the target language, but they can become more complex progressively and include pre-task activities, task planning, reporting, and assessment.
- During the pre-task phase, the teacher introduces the task goal and outcome. Teacher activates students' background knowledge to perform the task. The language and sentence frames needed are reviewed or introduced as well as phonological elements.

- As much as possible, teachers can have students do hands-on activities with the teacher once again emphasizing the key vocabulary.
- Explaining, clarifying and modeling the language as much as possible before and during the time when learners practice it in meaningful ways is recommended.
- As communicative competence develops, controlled scalfolded activities in listening, reading, speaking and writing are developed to help students recall, internalize and pronounce useful words and phrases demanded by the task that they will perform.
- Assigning learners meaningful tasks that resemble real language use where reading and writing or listening and speaking are integrated is recommended.
- Presenting and explaining learning objectives and expected outcomes of the task and assuring that learners understand task instructions is important
- It is advisable to provide learners with enough time for task preparation and clarification.
- The students will move from dependency on the teacher when solving a task to more autonomous work.
- It is important to support, monitor, and encourage the students while solving a task.

- Learners will have at their disposal useful words, phrases and idioms that they need to perform the task.
 It could be an audio recording with the instructions and the pronunciation of the words and phrases needed.
- The students solve the task together using all resources they have. They rehearse their presentation or revise their written report. Then, they present their spoken reports or display their written reports.
- Provide rubrics for assessing students' task performance and move progressively to selfassessment and peer assessment.
- Provide feedback and further practice on areas that need more work, listening, and writing, speaking, reading, vocabulary work, phonemic awareness, and the like.
- At the end of each unit, the students elaborate a miniproject to demonstrate achievement of unit goals within a domain, scenario and theme.
- As proficiency develops, provide learners with more complex tasks, which involve the use of words, phrases and later sentences on a more elaborate level.
- Teach English in English and make learners be socially and cognitively engaged.

General Mediation Principles for Third Cycle and Diversified Education

- English teaching places priority on the fine-tuning of learners communicative competence involving oral comprehension and oral and written communication so that they become independent users of English and can reach level B1 or A2+ based on the descriptors of the CEFR.
- Teachers can select three or four goals per week from the units. They can combine oral or written comprehension with oral and written production, depending on the pedagogical purpose of the lesson.
- Teachers start each theme of a unit's scenario and lesson with a warm-up activity. Then, they share the learning goals, and essential question with the students for that day or week.
- The enduring understanding is shared by the teacher at the beginning of each unit to connect students with the core ideas that have lasting value beyond the classroom.
- Lessons follow this learning cycle: warm-up, preteaching, practice, production and consolidation using the task-cycle as a model.
- The goal and expected outcome of the task is presented and explained to students for the productive

stage. In order to reach this stage the teacher follows a set of integrated sequence procedures as presented below to develop the different linguistic competences:

- a. **Oral Comprehension:** *Planning* (pre-listening, motivating, contextualizing, explaining task goal); *listening for the first time* (general understanding); *pair/group feedback; listening for the second time* (more detailed understanding); and self/co assessment.
- b. Written Comprehension: Planning (pre-reading, explaining task goal, use typographical clues, list difficulties/strategies to cope them); while-reading reading for the first time; pair/group feedback, reading for the second time, post-reading (for reacting to the content or focusing on features /language forms and self /co assessment).
- c. **Oral Production:** *Spoken interaction* (planning, organizing, rehearsing, and interacting) and *spoken production* (planning, organizing, rehearsing, and producing).
- d. **Written Production**: Pre-writing, drafting, revising, editing and publishing.
- Teacher makes sure that all learners understand task instructions.

- Teachers should ensure learners know how to use strategies through teacher scaffolding and modeling, peer collaboration and individual practice.
- Learners have at their disposition useful words, phrases and idioms that they need to perform the task.
 It could be an audio recording with the instructions and the pronunciation of the words and phrases needed.
- The task could involve the integration of listening and speaking or reading and writing and are given to students individually, in pairs, or teams.
- The students complete the task together using all resources they have. They rehearse their presentation, revise their written report, present their spoken reports or publish their written reports.
- Teacher monitors the learners' performance and encourages them when necessary.
- Preparation time, clarification and wait time is given to the learners to prepare and answer questions when asked.
- The students consciously assess their language performances (using rubrics, checklist and other technically designed instruments that are provided and explained to them in advance). Teachers assess performance, provide feedback in the form of

assistance, bring back useful words and phrases to students 'attention, and provide additional pedagogical resources to students who need more practice.

- At the end of each unit the learners develop and present integrated mini-projects to demonstrate mastery of the unit goals.
- The enduring understanding and essential question are central to articulate the three learnings: learn to know, learn to do and learn to be and live in community. The integrated mini-project is an opportunity for students to integrate these three learnings in a single task.
- Teach and plan English lessons in English to engage learners socially and cognitively.

Language Use and Learning

The CEFR describes language use and learning as actions performed by individuals to develop a range of competences, both general and communicative, that are used in various contexts by engaging in language activities involving language processes to produce and receive oral and written texts in relation to themes in specific domains. It (CEFR) promotes four language skills, where speaking is subdivided in two areas: spoken interaction and spoken production.

- Reading
- Spoken interaction
- Spoken production
- Writing

In this context, it is important to define some key concepts that describe language use and learning as they are presented in the CEFR.

Communicative language competences are those which empower a person to act using specifically linguistic means.

Context refers to the constellation of events and situational factors (physical and others), both internal and external to a person, in which acts of communication are embedded.

Language activities involve the exercise of one's communicative language competence in a specific domain in processing (receptively and/or productively) one or more texts in order to carry out a task.

Language processes refer to the chain of events, neurological and physiological, involved in the production and reception of speech and writing.

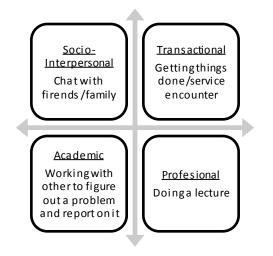

Text is any sequence or discourse (spoken and/or written) related to a specific domain and, which in the course of

• Listening

carrying out a task, becomes the occasion of a language activity, whether as a support or as a goal, as product or process.

Themes are subject matter or disciplinary topics, which are the subject of discourse, conversation, reflection, or composition as the focus of attention in particular communicative acts.

Domains are defined in this curriculum as the contexts or situations of target language use that provide authenticity to language tasks where learners will be likely to function linguistically, (Purpura, 2014). For the general purposes of language learning and teaching, it is useful to distinguish at least the following domains.

In order to accomplish language activities, the language learner needs to activate those strategies that look most appropriate for carrying out the tasks to be accomplished in the pertinent domain and activated by meaning in different scenarios

A scenario is a holistic setting within authentic situations, or domains. It integrates tasks, activities, texts and language data that encourage the combination of different aspects of competence in realistic language use. Purpura (2014) states that an assessment scenario is a goal–driven, coherent activity that involve the completion of a range of tasks in order to meet the scenario goals. It serves as a tool a tool for defining, teaching, and/or assessing the competences needed to perform real world tasks.

The syllabi scenarios have been established to start with the students' personal lives within the socio-interpersonal domain and then move gradually towards the local and outside world.

Template Elements

The following image shows the official template for the new syllabi of Preschool; First, Second, Third Cycles; and Diversified.

Level:		Unit:
Scenario:		Themes:
Enduring understand	ling	
Essential Question:		
Linguistic Com	petencies	Goals Learner can
		L1.
Oral and Written Comprehension	Reading	R.1.
	Spoken	SI.1
Oral and Written Production	Spoken Production	\$P.1
	Willing	W.1.

Learn to know	Learn to do	Learn to be and Live in Community	Suggested Mediation Strategies	Assessment Strategies
<u>Grammar &</u> Sentence Frames	Functions	Psycho-social	Pre-teaching	
Phonemic			Oral and Written Comprehension	
Awareness/ Phonology	<u>Discourse Markers</u>	<u>Sociocultural</u>	Oral and Written Production	
<u>Vocabulary</u>			Integrated Mini Project	

Template Elements				
Level	Grade level of the unit			
Unit	1 of 6			
Scenario	A real-life situation providing authenticity of situations, tasks, activities, texts			
Themes	The focus of attention for communicative acts			
Enduring Understanding	Big ideas that give importance and meaning to a set of curriculum expectations and have a lasting value for learners, beyond the classroom.			
Essential Question	A question, which fosters understanding and critical thinking for students to transfer their learnings to new context.			
Linguistic Competence	The knowledge, skills and abilities which are called upon when performing language acts			
Goals	Can-do performance descriptors			
Oral and Written Comprehension	What a learner can understand or is able to do when listening and/or reading			
Oral and Written Production	What a learner can produce in an oral and/or written way			
Learn to know	Linguistic competence: lexical, phonological, and syntactical knowledge			
Grammar & Sentence Frame	The grammatical components that will be the focus of the unit (with examples)			
Phonemic Awareness/ Phonology	Learners ability to hear, identify, and manipulate sounds in spoken words or sentences to progressively decode and interpret texts			
Vocabulary	Words learners need to know to communicate effectively within a domain, scenario, and theme			
Learn to do	Pragmatic competence: the functional use of linguistic resources – functions and discourse markers			
Function	The use of spoken discourse and/or written texts (acts of speech)			
Discourse Marker	Linking words or phrase that connect one piece of discourse with another one (e.g., and, because)			
Learn to be and Live in Community	Socio-linguistic competence: rules of politeness and norms governing social groups			
Psycho-social	Attitudes, motivations, values, beliefs, cognitive styles, and personality factors			
Sociocultural	Politeness conventions, expressions of folk wisdoms, register differences, dialects and accents			
Suggested Mediation Strategies	Organized, purposeful and scaffolded learning experiences			
Assessment Strategies	Required evidence of student's learning			

Strategies for Teaching the Linguistic Competence

Listening

Listening is one important language skill and has to be developed in the early stages of language learning. Learners must be prepared to listen, understand, and answer in an which appropriate way, is essential for effective communication. Before each listening activity, teachers give language support by introducing key words to familiarize students with the listening text. Background knowledge on the topic can be used to provide contextualization and potentially better comprehension. Teachers must provide students with opportunities to listen to a variety of texts. At the initial stages, conversations, short messages, free discussions, interviews, and/or role-plays are recommended. Then, in later stages, students are exposed to films, TV shows, reports, interviews, documentaries, current affairs, talk shows, radio news, broadcasts, narratives, lectures, and presentations on academic topics including digital literacy for using information technologies.

Active Listening Attitudes in English

It is important that teachers help students to develop and show an appropriate disposition for dealing with ambiguity when listening and interacting. This will help students to experience meaningful and engaging interaction in any social setting. In order to achieve this, the teacher should combine verbal and nonverbal listening techniques.

Nonverbal Cues

- Use body language to show you are listening.
- Make eye contact with the person with whom you are in dialogue.

Verbal

- Make affirmations.
- Ask relevant questions or summarize what the person with whom you are in dialogue has been saying.

The approach to this skill in this syllabus implies strategies from discrete listening to global listening. Discrete listening means listening for detail whereas global listening refers to listening for the main idea. Both of them involve different types of listening performances, and they will be shown by level in a rising progression from Preschool to the Diversified Education Cycle.

Preschool

Listening is the first skill developed in the process of language acquisition (Sharpe, 2001). Listeners play two roles, active and passive or a combination of both. Passive listening is basically listening and repeating, and active listening involves comprehension and nonverbal or verbal reaction to the message heard. Young learners can participate in different types of listening tasks like: listening to songs, chants, rhymes, stories, movies and cartoons. Any listening task needs to have a clear objective. Pedagogy involves three basic stages: prelistening, during-listening and post-listening.

Primary school

At this level, teachers continue to reinforce listening comprehension with different listening techniques such as reactive, intensive, and responsive. Reactive listening is merely listening and repeating like a tape recorder. Some performances are repeating songs, chants, and short stories. Intensive listening requires recognizing sounds, stress patterns, intonation patterns to understand meaning. Some performances are identifying specific language sounds or sentence structure in a set of words or phrases. Responsive listening is listening and responding to what is heard. Examples of performances include responding to commands, getting the gist of a text, identifying main ideas and points, clarification or questions.

Secondary school

There are a variety of listening techniques for developing listening skills and getting listening performances from students. They are: intensive, responsive, selective, extensive and interactive listening. Selective listening consists of scanning information from oral long messages. Some examples are listening to radio broadcasts, stories, conversations, and TV advertisements. Tasks include identifying specific details such as names, dates, descriptions. Extensive listening is getting the main idea of a message by using prior knowledge. It includes listening to lectures, documentaries, and movie clips. Some tasks are summarizing and note-taking to reconstruct an oral message. Interactive

performance is the integration of all the above types of listening. Some tasks are participating in group discussions, debates, and real life interactions. The process of recognizing sounds at this level is almost automatic. However, teachers need to reteach the recognition of sounds if students show difficulty with some of them.

All Levels

There is a common core for developing listening skills in all the levels, such as:

- a. Listen for the gist. Learners listen for the main idea in a text in order to gain a macro perspective. By using visual cues, learners can convey meaning from different texts.
- b. Listen for details. Students listen and look out for specific pieces of information such as key sounds, words or phrases. The use of what, when, where, why and how questions will guide students.
- c. Listen selectively. Learners will listen purposefully and specifically to parts of a text according to the purpose of the listening and the task. Teachers will guide students in organizing information using organizational strategies (e.g., classifying, comparing) for better mental retention.

d. Listen to make predictions. Learners will anticipate the intended message. They will listen more purposefully and attentively when they make predictions by using the context of the spoken discourse.

The CEFR descriptors will be used to assess students' listening abilities and provide follow-up to their progress.

Reading

Reading is the interaction between the reader and the text to construct implied or literal meaning. This skill intends to expose students to different types of texts and genres such as fiction, non-fiction, autobiographies, fables and fairytales, academic and non-academic texts by experiencing different reading techniques and developing different reading strategies. As it was defined in the listening section, there are several types of reading techniques that can be used in teaching reading. They include perceptive, selective, interactive, and extensive reading. These techniques can also be used to assess students' performances in reading. Examples of perceptive reading performances include reading aloud, multiple choice, and picture-cued items. Selective reading performances are gap filling, matching tasks, and editing. Interactive reading examples of performances are: cloze reading, scanning, and ordering tasks. Finally, extensive reading includes skimming, summarizing, note-taking, outlining, and digital literacy skills.

Preschool

At this level, students start recognizing sounds of language and recognizing letters and words. They start dealing with written forms and performing very basic tasks such as:

- storytelling in reactive reading
- matching pictures with graphic symbols,
- finding labeled classroom objects

There are many factors involved in learning to read for example:

- awareness of the concepts of print,
- ability to hear and manipulate the sounds of the language through the development of phonemic awareness,
- ability to apply knowledge of letter-sound correspondence to identify words, for example, decoding through phonics.

Primary school

At this level, students will continue developing sound and word identification skills to progressively decode phrases, sentences and short readings.

Phonemic awareness development: Phonemic awareness refers the ability of children to hear, identify, think about, and manipulate sounds (phonemes) in spoken language (Armbruster & Osborn, 2001). Research has shown that the development of phonemic awareness in children since kindergarten is a good predictor for a child's success when learning to read (Smith S. B., Simmons, D. C., & Kame'enui, 1998). There are specific strategies that are presented in a sequential order from the simplest to the more complex to develop phonemic awareness in children. These include phoneme isolation, phoneme identity, rhyming, phoneme categorization, sentence segmentation, phoneme addition, phoneme substitution. (See definitions in glossary).

Secondary school

At this level, learners will continue to develop and refine their reading comprehension strategies such as anticipation,

scanning, skimming, predicting, reading between the lines, making inferences, summarizing, and evaluating. These include decoding words and phrases in long and short texts, applying critical thinking skills, using content and cultural information to interpret texts and respond critically.

All Levels

There is a common method for developing reading skills at all the levels. These are:

- a. Activating schemata for the interpretation of texts
- b. Identifying general ideas
- c. Finding specific information
- d. Finding links and connections between events

Speaking

Speaking is divided into two areas: spoken interaction and spoken production; both of them describe specific language users' roles. In the first one, the language user functions as a speaker and as a listener. There is participation of one or more interlocutors. Different socio-cognitive and collaborative strategies are constantly employed during interaction. Some examples of interactive activities include:

- transactions,
- casual conversation,

- informal discussion,
- formal discussion,
- debates and interviews.

The second one describes the production of an oral text received by an audience of one or more listeners. Some examples of activities can be:

- public address (information, instructions, etc.),
- addressing audiences (speeches at public meetings, university lectures, sermons, entertainment, sports commentaries, sales presentations, etc.).

They may involve reading a

- written text aloud;
 - speaking from notes,
 - acting out a rehearsed role;
 - speaking spontaneously and singing.

Preschool

Children are expected to produce very simple pieces of discourse as a result of exposure to rich listening stimuli. Oral performances include repeating sounds and words, naming objects, responding to discourse routines, getting meaning across, repetition of songs, short stories, chants, nursery rhymes, short descriptions, and/or short personal exchanges.

Primary school

Children are expected to receive a lot of aural stimuli in the first years to progressively produce more complex sentences or pieces of discourse in the interpersonal and transactional domains as they move to different grade levels. Oral performances include personal exchanges, dialogues, roleplays, information-gap activities, and problem solving activities, interviews, guessing games, show and tell, short descriptions, debates, oral presentations and speeches.

Secondary school

Learners will keep developing their oral English proficiency as they progress through high school. Oral performances include participating in personal exchanges, role-plays, interviews, talk shows, debates, oral presentations and impromptu speeches.

All levels

The teaching of speaking at all levels aims at the practice and production of speech that is fluent and phrasal, not limited to isolated words. The learner has to be taught survival language and fillers to negotiate and get meaning across in and out of the classroom (for example, "excuse me", "What did you say?" "How do you say...?" "Well...", "you know...", "I mean"). Learners have to perform real life tasks that can be used in real exchanges out of the classroom setting. Therefore, more of the speaking tasks must have an interactive and spontaneous outcome. Learners should be taught words, phrases, idioms and colloquial language. Phonemic awareness along with phonological awareness will be developed progressively so that learners get the stress, rhythm and intonation of natural English speech. (Brown, 2001). Finally, the quality and quantity of learners' exposure to English as well as their use of English is fundamental. As the saying goes, "practice makes perfect".

Writing as a process

Writing is the skill that emphasizes through graphic symbols the formal expression of thought. Students need to know how to write different types of texts. When asking learners to write, it is important to consider their age, interests, and proficiency level. It is important to get students to write a wide variety of texts. Writing as a process includes the following steps:

- Brainstorming
- Organization of information through graphic organizers and outlines

- Drafting and revision
- Editing and final copy

To get students to become proficient writers, provide first a model to follow. Dictation is one example. It could be a word, a phrase, or a sentence. This is known as copying. After copying, learners will do writing exercises to refine grammar and mechanics. Then they move into guided-writing where they follow a given pattern for expressing personal thoughts and ideas. Next, learners are ready to do free-writing. At this stage, learners have already acquired the necessary skills to write their own sentences, paragraphs, stories, biographies or essays.

Preschool

A form of pre-writing is introduced progressively in the form of sound recognition through phonemic awareness first. Later on, depending on children's progress and interest, sound, and grapheme recognition will be introduced. Priority is given to sounds and graphemes that are meaningful and common in the child's context like their personal names. Pictographic expressions through drawings are highly recommended as part of the pre-writing process. Games and word puzzles are also recommended.

Primary school

As with preschoolers, prewriting is introduced first through phonemic awareness development. Then, as the child progresses, relationships between sound, graphemes and word families are established. Teacher's modeling of written language is vital at grapheme and word level through visual materials, diagrams, and pictures. Then, they will continue with phrases and sentences using written dialogues, chants, rhymes, conversations, stories, and word puzzles until they are ready to copy words, phrases, and sentences. Later on, they will move to guided-writing and finally to free-writing appropriate for the age and proficiency level of the learner.

Secondary school

Writing is closely connected to reading. By being exposed to different types of texts, learners get insights about how to write. It is expected that at this level, learners are completely literate in their native language and have started developing the writing process in Spanish at school. Therefore, it is easier for them to transfer some of their literacy skills into the target language and even refine their writing skills in English. Some basic principles to take into account are the following. Writing has four basic stages; pre-writing, drafting, revising, and editing. To make writing attractive to learners, it is important to provide authentic writing tasks like responding to an e-mail or digital message to a friend.

All levels

A balance must be kept between the perspective of teaching writing as a process and as a product. Initiate first with phonemic awareness development. Spend a lot of time in prewriting work and provide a lot of modeling, drilling, writing exercises and then guided writing activities. Make sure that the writing activities emerge naturally from previous reading, listening or oral work. Praise learners for their writing products. Display the writing productions of students and keep them in a writing portfolio. Create rubrics for self-assessment, peer assessment and teacher's assessment of students' writing. The CEFR descriptors will be used to assess students' writing abilities and provide follow-up to their progress.

Language Learning Strategies

In language learning and teaching, several mechanisms influence the learner's performance and language knowledge. These mechanisms used by the learners are called strategic competence, which defined Purpura (2016) during a conference as "a set of informational strategies in working long-term memory associated with the information processing system of the brain" which are used by learners to regulate

their thoughts actions, interpersonal relationships and affect during learning or using a language.

Furthermore, Oxford (2003) defines learning strategies as "specifications, behaviors, steps or techniques -- such as seeking out conversation patterns or giving oneself encouragement to tackle a difficult language task – used by students to enhance their own learning".

Teaching learning strategies is a must in the learning process, in order to enable learners to become intentionally controlled, more independent and autonomous. Learning strategies cannot be seen apart from learning styles preferences (within a continuum) and the combination of methodology and materials as well.

Oxford, since 1990, has identified six major groups of L2 learning strategies, which are described in the following chart. According to Purpura (1999), learners move flexibly between strategic and automatic processing while performing tasks. They acquire a language gradually until they use it spontaneously or in a nonconscious way. In the syllabus templates, the strategies mentioned below are suggested as part of the mediation process.

	Direct Strategies					
Strategy	Function	Examples				
Memory	Enable learners to store and retrieve new information of new language.	grouping, imagery and rhyming, creating mental images, sounds, semantic mapping, reviewing, employing action, using TPR				
Cognitive	Enable learners to understand and produce new language.	reasoning, analyzing, resourcing, grouping, note-taking, elaboration of prior knowledge, summarizing, deduction/ induction, imagery, auditory representation, making inferences, highlighting, creating structure for input and output				
Compensation	Allow learners to use the language despite knowledge gaps.	coining new words, guessing, overcoming limitations in production				
	Indired	t Strategies				
Strategy	Function	Examples				
Metacognitive	Allow learners to evaluate their own language learning pattern, and coordinate the learning process.	 reviewing and linking prior knowledge, delaying speech production to focus on listening. Planning and arranging: finding out about language learning, organizing, and setting goals and objectives, identifying the purpose of a language task, planning for a language task and seeking practice opportunities. Evaluating by means of: Self-monitoring: checking one's comprehension during listening or reading. Self-evaluating: checking one's oral or written production while is taking place. 				
Meta-Affective	Help learners gain control and regulate personal emotions, attitudes and values.	Self-talk, Think positively, Reducing anxiety by improving one's sense of competence, self-encouragement				
Meta-Social	Allow learners to interact with others.	Cooperate, work with classmates, coach each other, questioning, and empathizing, questioning for clarification				

Assessment

Evaluation and assessment are different. Brindley (Brindley, 1989) defines evaluation as "broader in scope, and concerned with the overall program" (qtd.ln Coombe, Folse & Hubley, p15). On the other hand, assessment refers to all the strategies used to collect information on a learner's knowledge, skills, and abilities, usually at the classroom level. Assessment practices go beyond what has traditionally been performed in the English classroom, which has been focused mainly on measuring the mastery of language contents, in detriment of language skills and communicative competence.

Assessment is a purposeful, continuous, contextualized, authentic, reflective, investigative, systematic and multiphase process, which responds to these four fundamental questions: Why assessing learning? What to assess? How to assess it? Which are the pedagogical implications?

The answer to the first question deals with understanding that each learner is different, has particular needs, strengths and weaknesses. The purpose of assessment is to serve each learner's learning and growth. To prevent student's failure and allow timely intervention, assessment allows teachers to detect learning gaps, so that learners can receive the support needed to be successful. The "what" of assessment involves having

clarity about the knowledge, skills, abilities, and attitudes (learn to know, learn to do, learn to be and live in community) that learners have to develop as established in the curriculum goals or "can do performance descriptors". This implies that assessment will mainly be performance-based. Learners are required to demonstrate through integrated-skills tasks within a domain, scenario and theme, specified knowledge, skills and abilities using the target language. Asessment can also be a discrete point, which means the use of selected response tasks to isolate and measure discrete units of grammatical knowledge, which emcompasses grammatical, semantic and pragmatic knowledge -- form, meaning and use (Purpura, 2014, p 9). Assessment will also be authentic which means that the assessment task will simulate real-life situations within domains and scenarios beyond the classroom setting, and the socio-cognitve, socio-affective, socio-cultural and linguistic demands upon the learner will be similar to the one of a speaker in a target language setting.

Classroom assessment mirrors the learning goals, content of instruction and instructional practices, therefore, curriculum, teaching, and assessment must be coherent for learning goals to be achieved and learners' communicative competence to be developed. This is true for large-scale testing as well. Classroom assessment should also enable learners to

demonstrate their learning in multilple ways, from multiple angles, thus serving as learning experiences themselves. Classroom assessment should also promote students' reflection and the use of an array of learning strategies and resources (Teachers of English to Speakers of Other Languages, p. 8).

Planning lessons carefully, therefore, is of paramount importance. The "how" of assessment is related to the techniques and instruments teachers design to collect accurate data on students'performances. The teaching and learning approach that is promoted in the curriculum is mainly Action-Oriented or performance-based. This means that tasks are designed as prompts to elicit linguistic performances using various socio-cognitive, socio-cultural, and affective resources from learners. Task design, task performance, and assessment become a fundamental unit of instructed learning; tools such as analytic and/or holistic scales, rubrics, progress indicators and checklists play an important role for obtaining valid and realiable qualitative and quantitative data about students' learning and performance.

<u>General Principles for assessing language competences</u> Performance-based assessment is based on three cornerstones: diagnostic, formative and summative

assessment. Each of them play an important role in the English classroom.

Diagnostic assessment is intended to improve information to stakeholders to improve the learner's experience and their level of achievement. It looks backwards rather than forwards. It assesses what the learner already knows and/or the nature of difficulties that the learner might have, which, if undiagnosed, might limit their engagement in new learning. It identifies the starting line to develop the competence. It also identifies students' needs and areas of intervention.

Formative assessment is used to monitor student learning. It helps to identify students' strengths and weaknesses and target areas that need work and to recognize where students are struggling and address problems immediately. It can be used by instructors to improve their teaching and improve students' learning. It also evaluates students in the process of "forming" their competences and skills with the goal of helping them to continue that growth process. In short, it focuses on the process to develop competence by using information from the analysis of weaknesses and strengths in portfolios, assignments, or different products.

Summative assessment is centered in the strategies implemented to develop competence. It evaluates student

learning at the end of an instructional unit by comparing it against a standard or benchmark. The information provided by this type of assessment can be used formatively to guide their efforts and activities in subsequent courses.

When assessing by competences, it is necessary to focus on:

- 1. Selecting the goal(s) or can do statements and linguistic skills.
- 2. Determining the type of task the learner has to perform in real-life within the theme and scenario of the unit, e.g., introducing someone, greeting someone, giving personal information.
- 3. Selecting a task that will allow the learner to demonstrate what they can do.
- Selecting the indicators and performance levels (criteria) that will be used to assess the performance of the learner during the task.
- Informing in advance and discussing with students the criteria that will be used to assess the task so they know what is expected and can assess their own performance as well.

To cope with the approaches used in the design of this syllabus, the assessing techniques should reflect the dynamic classroom procedures and should promote critical thinking among the students in any learning task they perform such as: informationgap, opinion-gap, problem-solving, games and critical cultural incidents which help the learners appreciate their own culture and the culture of the target language.

The components of assessment and their weight are in line with the Learning Assessment Regulations.

Student Exit Profile: First, Second, Third Cycles and Diversified Education

The profiles are structured around elements specific to the CEFR and an extension of the CEFR descriptors adapted to the vision of the curriculum in the Costa Rican educational context. The CEFR describes areas of language learning around general competences such as: declarative knowledge, sociocultural knowledge and intercultural awareness that grows over the length of time as learner's progress simultaneously in the process of language learning. It also specifies communicative competences that enable learners to interact in the target language. The first of these competences is **linguistic (learn to know)** and is comprised of vocabulary (lexis), grammar (syntax), meaning (semantics), and sound (phonology), and sound-symbol relationships (orthography).

The second is **pragmatic (learn to do)** competence and describes how learners function with language in order to meet their needs such as describing, explaining, and summarizing. These language functions occur within varying styles (discourse, genres) of communication such as narration versus expository texts (oral or written). These competences are summarized in the exit profiles for each level of proficiency.

Finally, **sociolinguistic (learn to be and live in community)** competence allows learners to interact in socially appropriate ways regarding aspects such as conventions for politeness, social markers for respect, and varying registers depending on the domain in which communication occurs such as, interpersonal, transactional, academic or professional domains. For cycles I and II the domains center on the interpersonal (family, self) and transactional (leisure, cultural, public services) domains.

Furthermore, skills related to listening, speaking, reading and writing are summarized for each level. These skills are developed through lesson activities whereby learners are required to receive language inputs (**listening and reading**),

interpret the input through mediation activities and reformulate language to produce outputs (**speaking and writing**).

The amount of time it takes for learners to develop proficiency in the areas and contexts mentioned above varies greatly. The speed of learning depends on factors such as: age, motivation for learning, background knowledge, amount of prior study, and the extent of exposure to the language outside the classroom, and the amount of time spent in individual study. However, considering items such as (but not limited to) the type of program design, and the amount of classroom hours devoted to foreign language teaching each year, the following proficiency levels are described within an A1 and then a B1 category as classified under the CEFR.

These levels are detailed by cycle as follows:

New Citizenship Learner Exit Profile for Second Cycle							
Types of knowledge	Learn to know	Learn to do	Learn to be and live in community				
Orientations to	What the learner needs to know Learner	What the learner needs to do	How the learner needs to be				
A Global Citizenship with Local Belonging.	 extracts explicit information from visual and simple texts. uses oral and written codes for communicating simples and familiar ideas. organizes data in sequential order regarding time and space. searches for comprehending meaningful knowledge from graphs, question and data. chooses ideas and examples to provide an answer. 	 recognizes different styles when working in groups according to skills and motivations. practices assertive communications skills. is aware of his/her own abilities and limitations. applies knowledge and procedures in context. understands gradually different ways of solving problems gradually. identifies successful and limited aspects of his own learning. administers time effectively. Understands the purpose of given instructions and meaningful information of tasks. 	 recognizes his/her own rights and responsibilities and the ones of others gradually. Understands diversity in his/her family, school, society, and context. practices healthy habits for his and others for wellbeing. participates in peaceful conflict solving. discovers new relations among people and living creatures. shows self-confidence to overcome learning barriers. appreciates values and ethical civic principles. participates in local and national cultural events. 				
Education for Sustainable Development	 expresses different ways of facing environmental risks affecting life. 	 values the implication of efforts over the achievement of goals. 	attitudes, actions over sustainable development.				
New Digital Citizenship	 knows main characteristics of digital means for accessing information. organizes diverse and basic information. 	 produces and enriches tasks e.g., words and phrases to communicate ideas using digital icons and codes. 	 understands social benefits, harmful and ethical implications of ICT for learning and interpersonal relations. 				

	Scope and Sequence Second Cycle						
Level	Unit 1	Unit 2	Unit 3	Unit 4	Unit 5	Unit 6	
Fourth Grade	 Scenario: Weather Wise Themes: Weather and Seasons Sunshine and Rainbows - my Feelings What to Wear? "Walking in the Rain"- Indoor and Outdoor Activities 	Scenario: Natural Treasures Themes: • Places and People at the Park • Wildlife at the Park • A trip to a National Park • Protecting our National Parks	Scenario: Farm to Table Themes: • At the Farm • Let's Go to the Farmers' Market • Let's Make a Meal • May I Have your Order?	Scenario: Take Care Themes: • Not Feeling Well! • Doctor, Doctor! • Pharmacy: Injections, Pills, and Creams Oh, my! • I went to the Doctor Yesterday	Scenario: What a Disaster! Themes: • Was That an Earthquake? • It Was Raining Cats and Dogs • Calling 911 • Getting Ready for a Natural Disaster	Scenario: OH! The Places you will Go. Themes: • Where to Go • Different People, Different Places • Planning Vacations • Oh, the Things that you will Do	
Fifth Grade	Scenario: Go Green Themes: • Our Environment: Makingthe Connection • Actions that Harm the Environment • Protecting my Planet • Solving Environmental Problems	Scenario: Pura Vida in Many Ways Themes: • What's Goingon in Town? • What Makes your Province Unique? • Costa Rica: "No Artificial Ingre dientes" • In & Out Costa Rica	Scenario: Connecting Electronically Themes: • Using Electronic Devices • At the Electronic Devices Store • What is Better a Tablet or a Computer? • Operating and Taking Care of Electronic Devices	Scenario: Healthy Choices, Better Life Themes: • Uhm! I'm Hungry • What did you Cook? • Let's Stay in Shape • Healthy Lifestyles	Scenario: Tell me a story Themes: • Once upon a Time • What a Wonderful Story! • Acting it Out • Let's Write a Story	Scenario: Let's play Themes: • What do you Do for Fun? • Sharing Hobbies and Pastimes • Do you Have Plans for the Weekend? • How Was your Weekend?	
Sixth Grade	Scenario: Costa Rican Heroes Themes: • National Heroes and Famous People • Super Heroes World Famous People • My Hero is the Best. • I Can Be a Hero	Scenario: Staying Safe in a Digital World Themes: • The Latest School Gadgets on the Market • Let's Make a Project using Technology • Technology's Unwritten Rules • Tips for Using Technology Safely and Responsibly	Scenario: Environmentally Speaking (trash talking) Themes: • What Is Litter? • Why Is Litter Dad? • Where Does Litter Go? • What Can I Do about Litter?	Scenario: Rainforest Rescue Themes: • The Rainforest: a Treasure • Are We Saying "Goodbye" to the Rainforest? • Ways to Rescue it. • My Role in the Rainforest Rescue.	Scenario: Let's party Themes: • Party Time, • Sending Invitations, • Throwing a Party, • How Was the Party?	Scenario: Focus on the Future Themes: • Immediate Future • Having the End in Mind • Values and Beliefs • Future Me	

Level							
A2.1 Grade 4							
		Communicative Competence					
At this stage, the learner can.							
Learn to know use short memorized phrases about predictable situations within interpersonal and transa domains and language level such as daily routines, wants, and needs. S/he shows from breakdowns in communication and misunderstandings occur in new situations where they n search for words in their limited vocabulary in order to communicate their message.							
Learn to do	use level-appropriate linguistic and topical resources in order to listen, read, speak and write in response to level and age-appropriate tasks, integrating language and topical knowledge, skills and abilities (KSA) within domains, scenarios, and themes. S/he may use linking words such <i>first, then, after that</i> and <i>finally</i> to connect groups of words. S/he expands language functions to include sequencing instructions, comparing and contrasting ideas and characteristics of certain items.						
Learn to be and live in community	in use personal and social dispositions (e.g., coping, engagement, attitudes, cooperation, turn taking, empathy, and other universal values) when interacting and producing in the target language and taking time to search for words using oral and body language for transferable learning (enduring understanding). S/he uses various resources in order to connect personally with the information, beyond the curriculum.						
Listening	Reading	Speaking (spoken interaction & production)	Writing				
CEFR STANDARDS	CEFR STANDARDS	CEFR STANDARDS	CEFR STANDARDS				
Can understand sentences and basic information relevant to personal needs and family activities.	 Can develop the ability to decode words using letter-sound knowledge. Can read and comprehend text with repetitive, predictable patterns. 	 Can communicate about simple, routine tasks requiring a direct exchange of information on familiar or everyday topics. Can produce words, short phrases and simple sentences with linguistic support such as 	 Can begin to independently write single words and phrases in English; relay short messages supported by drawing, using inventive spelling within highly supported structures 				

INTEGRATION OF LANGUAGE SKILLS • Can transfer oral inputs	 INTEGRATION OF LANGUAGE SKILLS Can read and spell words.(Read to write, read to 	 framed sentences with lists of familiar words to choose from. Can describe past events and experiences. 	 sentences. INTEGRATION OF LANGUAGE SKILLS Can rewrite a short story

Scenario:		Themes:
Natural Treasures		 Places and People at the Park Wildlife at the Park A Trip to a National Park Protecting our National Parks provide homes and food to animals and jobs, education and entertainment for people.
Essential Question: Wh	ny do national parks	s matter to us?
Linguistic Com	petencies	Goals
Oral and Written Comprehension	Listening Reading	 Learner can L.1. understand short and clear, explanations when delivered slowly (e.g The description of a national park). L.2. understand the main points in short, simple stories and reports when there is some previous understanding of the topic and if they are read slowly, clearly and possibly repeated and accompanied with drawings and/or diagrams. R.1. understand much of what is written in short, simple texts on subjects with which they are familiar and/or in which they are interested. R.2. comprehend readings and enjoy texts. R.3. follow a set of clear-cut instructions, especially if there are pictures or diagrams to illustrate the most important steps. R.PA4. distinguish short vowel sounds in medial positions of words. R.PA5. decode English graphemes and phonemes using knowledge of phonemic awareness.

	Spoken Interaction	 SI.1. ask straightforward questions in familiar situations and understand the responses. SI.2. exchange information about everyday matters using simple vocabulary (e.g., favorite sports, names of pets, holiday plans).
Oral and Written Production	Spoken Production	SP.1. express common feelings.
	Writing	W.1. engage in the writing process: pre-drafting, drafting.W.2. use simple sentences and expressions to describe such things as their surroundings, their daily activities, and the people around them.

Scenario:		Themes:
Oh, the Places You Will Go1. Where to Go2. Different People, Different Places3. Planning a Vacation		 Where to Go Different People, Different Places
Enduring understandin	ig: A good vacation	requires proper planning. Different people like to do different things on their vacations.
Essential Question: Wh	nat makes a good v	acation?
Linguistic Com	petencies	Goals
		Learner can
Oral and Written Comprehension	Listening Reading	 L.1. understand the main points in short, simple stories and reports when there is some previous understanding of the topic and if they are read slowly, clearly and possibly repeated. L.2. understand phrases and high frequency vocabulary related to areas of personal interest (e.g. On vacation, we will swim in the sea and eat fish). R.1. comprehend readings, analyze and enjoy texts. R.2. understand most of what occurs in a well-structured short story and can identify the story's main characters. R.PA3. indentify the sounds /3: / p://æ // n/
	Spoken Interaction	 SI.1. ask others about their likes and dislikes (e.g. discuss favorite foods of Costa Rican vacation destinations). SI.2. ask straightforward questions in familiar situations and understand the responses. SP.1. describe basic aspects of an event.
Oral and Written Production	Spoken Production	

W.1. write, with the help of illustrations, an explanation of where they will go how to get there, and what they will do.

W.2. apply conventions of standard English.

A2.1 Grades 5-6 Integral Development and Communicative Competence				
At this stage, the learner car	U I	Communicative Competence		
Learn to know	use simple basic sentence patter	ns and words which are level-appro		
Learn to do	themselves and other people, what they do, places, and possessions. use level-appropriate linguistic and topical resources in order to listen, read, speak and write in response to level and age-appropriate tasks, integrating language and topical knowledge, skills and abilities (KSA) within domains, scenarios and themes. S/he may use linking words such <i>first,</i> <i>next, then</i> and <i>finally</i> to connect groups of words. S/he expands language functions to include comparing and contrasting ideas and characteristics of certain items, expands learned phrases by using more language functions for such things as categorizing items, asking informational questions, predicting, explaining cause and effect.			
Learn to be and live in community	 use personal and social dispositions (e.g., coping, engagement, attitudes, cooperation, turn taking, empathy, and other universal values) when interacting and producing in the target language and taking time to search for words using oral and body language for transferable learning (enduring understanding). Use various resources in order to connect personally with the information, beyond the curriculum. S/he participates in social situations by expressing opinions and attitudes in a simple way using common social courtesies.

Unit: 3

Scenario:	Themes:
	1. What Is Litter?

Environmentally		 2. Why is Litter Bad? 3. Where Does Litter Go? 4. What Can I do About Litter?
will help our neighbors to	•	school, community, Costa Rica and the world. The actions we take now to help with litter ire.
Essential Question: Wh	y should we be co	ncerned about litter?
Linguistic Comp	oetencies	Goals Learner can
		 L.1. understand the dialogue of a movie or cartoon when the visuals provide contextual support. L.2. understand simple procedural explanations if given slowly and clearly, and opportunity is given for clarification (e.g., how to do a project to have a cleaner school, how to live in a cleaner society).
Oral and Written Comprehension	Reading	R.1. use knowledge of first language to aid in understanding the second language.R.2. follow instructions for protecting the environment from litter (e.g., reuse, recycle, reduce litter)
		 R.3. understand short instructions illustrated through step-by-step visuals (e.g., simple science experiments, instructions for art projects). R.PA. 4. demonstrate knowledge of phonemic awareness
Oral and Written	Spoken Interaction	SI.1. ask for information (e.g., where trash cans are located, if students use trash cans) as well as offer simple explanations to others.
Production	Spoken Production	SP.1. describe, using simple words, their opinion of a situation or event (e.g. too much trash, ugly litter, dumping garbage).SP.2. produce a summary of a short story expressed in a simple sequence of events.

W.1. write straightforward text on topics familiar to them using appropriate transitional words such as 'and', 'but' and' because'. Can use important connecting words to indicate chronological order (e.g., 'then', 'after','later').

W.2. use simple grammatical structures to write simple texts.

Learn to know	Learn to do	Learn to be and live in community	Suggested Mediation Strategies	Assessment Strategies
Grammar & Grammar & Sentence Frame Using verb tenses (past, present, and future) - Litter pollutes rivers and sewers. - He planted some plants in the yard last week. - She will collect litter around school tomorrow. Wh information questions in present tense - Who leaves litter on the ground? - What can you do about litter?	 - Functions Describing places and things Describing how litter effects the environment Describing cause and effect relationships Describing cause and effect relationships Retelling events 	 live in community Psycho-social Expressing positive attitudes such as pride in their culture and community Showing intrinsic/extrinsic motivations for social responsibility focused on the community Describing values related to ethical and moral service <u>Sociocultural</u> Applying 	 Pre-teaching Using games, brain gym, songs, icebreakers, picture story as warm-up strategies. Activating prior knowledge using brainstorming. Introducing key vocabulary, sentence frames, grammar, sounds, and socio-cultural aspects with visual aids, technology or graphic organizers. Essential Question: What makes a party a good or bad experience?			
Linguistic Competencies		Goals	
	Learner	can	

		 L.1. follow verbal instructions for an activity when spoken clearly and slowly. L.2. understand a presentation on a topic when the subject is familiar to them and it is delivered slowly and clearly (e.g., another student's report on a classroom project).
Oral and Written Comprehension	Reading	 R.1. understand the main information in short articles and reports (e.g., how people celebrate events in other places) if they deal with familiar subjects. R.2. understand short instructions illustrated through step-by-step visuals (e.g instructions for a project). R.3. demonstrate phonemic awareness.
	Spoken Interaction	SI.1. ask for a word to be spelled out and can spell out names or words themselves.
Oral and Written Production	Spoken Production	 SP.1. provide a simple description of a common object or event (e.g., items used for a party). SP.2. provide a short, simple account of something experienced (e.g., a class project or a party).
	Writing	W.1. write down key words and phrases during an oral presentation.W.2. apply conventions of standard English.

Glossary

Ability: The present or potential competence of an individual to perform a task or to use skills, including ones that are intellectual and physical.

Academic Language: The language of schooling and the language that helps students acquire and use the content area knowledge taught in school.

Action-oriented tasks: Purposeful acts set in a context that learners could face in everyday life in a variety of situations. These tasks are open-ended and complex, requiring a variety of knowledge and skills, and there are many possible paths leading to attaining the specific end goal.

Activity: A specific work that allows the students to interact with the language, independently or collectively, receiving teacher's special attention and feedback.

Alternative Assessment: Avariety of assessment approaches that do not use multiple-choice or closed-response items, but instead require the examinees to generate or produce

responses or products. Generally, this includes any assessment technique other than traditional norm-referenced or criterion-referenced paper-and-pencil tests. Examples are essays, portfolios, interviews, observations, work samples, and group projects.

Asking for help: Suggestions a learner asks for help from a groupmate regarding the ideas and/or language needed for an uncoming task.

Assess: to stimulate the degree of quality or quantity, or to describe or document the nature of an aspect of behavior, learning, or performance.

Assessment: The process of gathering, from a variety of sources, information that accurately reflects how well a student is achieving the curriculum expectations in a subject or course.

Assessment for learning: The process of gathering and interpreting evidence about student learning for the purpose of determining where students are in their learning, where they need to go, and how best to get there. The information gathered is used by teachers to provide ongoing feedback and adjust instruction and by students to focus their learning.

Checklist: An instrument that specifies criteria or indicators of merit and on which the assessor ore evaluator marks the presence or absence of the attribute being assessed.

Checking meaning: learners understand the meaning of words in the written or oral isntructions in order to better prepare for an upcoming task.

Co-assessment: jugments by the teacher or peers.

Communicative Language Competence: The ability to recognize and produce authentic and appropriate language correctly and fluently in any situation; the use of language in realistic, everyday settings; involves grammatical competence, sociolinguistic competence, discourse competence, and

Competence: The sum-up of knowledge, skills, and abilities learners use when performing all kinds of actions including language activities.

General competence:

Context: Refers to the constellation of events and situational factors (physical and others), both internal and external to a person, in which acts of communication are embedded.

Curriculum: (1) A comprehensive overview, including activities planned for delivery to the students, the scope of

content, the sequence of materials, interpretation and balance of subject matter, and motivational, instructional, and assessment techniques to be used. (2) a set of ordered, intended learning outcomes.

Drilling: Refers to constant repetition of a task to accomplish mastery of such. Audio-lingual approach frames drilling as traditional yet effective technique if adapted properly. Lower levels of language learner benefit from it when working with relevant structures.

Domain: Refers to the broad sectors of social life in which social agents operate.

Enduring Understanding: A statement summarizing important ideas and core processes that have lasting value beyond the classroom. It guides the teacher along the unit and synthesizes what is expected for the learners to understand along the didactic units.

Essential Question: A question to develop and deepen learners' understanding of important ideas and processes, so that they can transfer their learning within and outside school. It stimulates learner thinking and inquiry processes.

Evaluation: A process of collecting and critically analyzing data with the purpose of improved decision making, enhanced

performance and continuous development of educational institutions.

Evaluating A strategy for determining the success of the outcome and performance when completing a learning task.

Fluency: The ability to express oneself readily and effortlessly.

Functional competence: The use of spoken discourse and written texts in communication for particular functional purposes.

Giving help: Suggestion given by a learner to provide help when reuested for help regarding the ideas and/or language nedded for an upcoming task.

Grapheme: The smallest part of written language that represents a phoneme in the spelling of a word.

Grammatical Competence: According to the CEFR, grammatical competence refers to the knowledge of/and ability to use the grammatical resources of a language.

Higher-Order Thinking Skills (HOTS): Those thought processes that are needed to solve problems and make necessary decisions in everyday activities, as well as the mental processes needed to benefit from instruction.

Examples of such skills are observing, summarizing, justifying, developing explanations, and making inferences (deductive and inductive).

Impromptu speech: A classroom technique which consists of assigning students with topics to develop in the form of speech, providing little or no time for planning or organizing ideas, thus encouraging spontaneity and forcing the learner to speak.

Information gap activities: Students are given partial information so they must interact with others to fill up the missing elements and achieve a language goal. Cooperative learning principles are sought.

Indicators: Facts and quantifiable data which can be measured and which will provide evidence about whether certain quality standards have been achieved. Indicators are representative of what learners need to know and/or be able to do in order to achieve an outcome. Indicators represent the breadth and the depth of the outcome. The list provided in the curriculum is not an exhaustive list.

Integrated Mini-Project: It is a formative, skill-integrated performance assessment strategy involving several types of activities and products for completion. Most Integrated Mini-

Projects involve planning, creating, rehersing and usually end with a report (oral or written). E.g,completing several data collection activities on neighborhood needs and writing a report; or planning an experiment on oral erosion and setting up several situations to compare results; or designing a piece of furniture and building a prototype.

Interaction: When at least two individuals participate in an oral and/or written exchange in which production and reception alternate and may in fact overlap in oral communication.

Inquiry: involves children in some type of exploration, investigation, or experimentation regarding a specific topic, problem, or issue for play, learning, and action. Inquiry is a way of opening up spaces for children's interests and involving them in as many different aspects of a topic, problem, or issue as children can find.

Journal: A daily or weekly record of events which individuals may be asked to keep as part of the instructional activities, jobs, or programs in which they participate. Journal entries may be used to judge writing, progress on projects, and perceptions of experiences. In classrooms, journals can be designed and used to measure changes in writing skills over time. **Knowledge:** A set of informational structures (knowledge or facts, stored in concepts, images, network, production-like structures, propositions schemata & representations) that are built up through experience and stored (and available) in long-term memory.

ability: (Sometimes called communicative Language competence or language proficiency) Individual's capacity to utilize mental representations of language knowledge built up through practice or experience in order to convey meaning. Language ability is a combination of language knowledge and strategic competence such as meta-cognitive strategies (e.g., planning, evaluating) cognitive strategies and (e.g., associating, clarifying).

Language knowledge: A mental representation of informational structure related to language.

Language Performance: The use of language in actual language events. (Carroll, 1968) The actual manifestation of linguistic competence in behavior (p 50).

Language Proficiency Levels: The demarcation along the second language acquisition continuum that is defined within the standards by a series of sample performance indicators.

Learnings: The learnings are built up through a social and dynamic process, which maximizes the potential conditions of a learner and the ones within his community. It is in a process of permanent evolution, of construction and reconstruction of meaningful knowledge, skills and abilities for life: learning to know, learning to do, learning to be and live in community (Delors, 1998). It is tied up to life and influences the integral development of people.

Learning Strategies: L2 learning strategies are specific behaviors or thought processes that students use to enhance their own L2 learning.

Learning Outcomes: The products of instruction or exposure to new knowledge or skills. Examples include mastery of a new skill, successful completion of a course or program, finishing a project or report, or attaining a given level of performance on an assessment.

Metacognition: Understanding one's own learning process, the nature of the learning task, and the strategies that should be effective. These processes include planning, activating, monitoring, and evaluating of lower-order skills. Self-evaluation of cognitive activities can be developed to enhance performance. The process of thinking about one's own thought process. Metacognitive skills include the ability to monitor one's own learning.

Meta-cognitive awareness: The knowledge of a range of problem-solving strategies, such as planning and goal setting, regarded as the key to successful language learning.

Monitoring: A strategy for checking the progress in the learning situations or carrying a learning task.

Morphology: The study of the structure and form of words in language or a language, including inflection, derivation, and the formation of compounds.

Onset-Rime: The onset is the part of the word before the vowel; not all words have onsets. The rime is the part of the word including the vowel and what follows it.

Oral production: When language users produce an oral text which is received by an audience of one or more listeners.

Outcome: A statement of what children are expected to know, understand, and be able to do by the end of a particular grade.

Planning A strategy for stating the task goal, sharing what s/he knows about the topic, predicting meaning supported by typographical and visual clues, listing possible difficulties and strategies for coping them.

Performance: Based on Chomsky's insights, it refers to the ability to understand and produce language.

Performance Assessment: Requires the learner to provide a sampe of language a sample of language in speech writing in a direct text.

Peer correction: When students are given the responsibility to assess their classmates' work with the purpose of providing feedback in the form of corrections to improve the original task.

Pragmatics: A variety of implied meanings superimposed upon the grammatical forms and meanings of an utterance (Purpura).

Pragmatic Competence: According to the CEFR, pragmatic competences are concerned with the functional use of linguistic resources, the mastery of discourse, cohesion, coherence, the identification of text types and forms, and such intentional devices as irony and parody.

Phoneme: A phoneme is a speech sound. It is the smallest unit of language and has no inherent meaning.

Phonics: Use of the code (sound-symbol relationships to recognize words.

Phonological Awareness: The ability to hear and manipulate the sound structure of language. This encompassing term involves working with the sounds of language at the word, syllable, and phoneme level.

Phonemic awareness: Refers the ability of children to hear, identify, think about, and manipulate sounds (phonemes) in spoken language.

Phoneme isolation: Deals with activities that help children recognize individual sounds in a word.

Phoneme identity: Children are exposed to activities where they recognize the same sound in different words.

Phoneme blending: The teachers says a sequence of separate phoneme to the children for them to combine them and form a word.

Phoneme segmentation: Children are exposed to activities where they say each of the sounds in a word separately as they count them.

Phoneme deletion: Children identify the word that remains when a phoneme is removed from the same word.

Phoneme addition: When children make a new word adding a phoneme to an existing word.

Phoneme substitution: When children substitute a phoneme in a word to make a new word.

Positive self-talk: Self-suggestions of thinking positively for self-encouragent, in order to reduce anxiety for an upcoming task.

Proficiency: What someone can do/knows in relation to the application of the subject. It represents an external perspective.

Rehearsing: A preparation session with a view to preparing what to say in a task.

Realia: The use of real life objects, sources and other digital or physical materials as classroom input with the goal of embracing the target language and encouraging students' interaction.

Reflection: The process by which an individual reviews his/her past performance as a means of improving future performance.

Sentence segmentation: Children listen to short unscrambled sentence and they have to put it in the correct order.

Sample Performance Indicators (SPIs): Illustrative language behaviors associated with each language proficiency level; examples of assessable tasks that students can be expected to know or to do as they approach the transition to the next level of English language proficiency in any given standard. **Scenarios:** They suggest appropriate background to support learning and teaching and to provide authenticity of situations, tasks, activities, texts within holistic settings. In this syllabus, this mental framework is set up by articulating the linguistic and non-linguistic aspects, such as the unit's name, themes ad functions, the enduring understanding and essential question, which are all integrated in the mini-project(s).

Scoring Rubric: A set of rules, guidelines, or benchmarks at different levels of performance, or prescribed descriptors for use in quantifying measures of attributes and performance.

Segmentation: The separation of words into phonemes.

Self-assessment: Judgements about your own proficiency

Sociolinguistic Competence: According to the CEFR, sociolinguistic competence refers to the sociocultural conditions of language use.

Skill Integration: Combination of two or more language skills: listening, reading, speaking and writing when working with tasks so students will incorporate important aspects into their language learning.

Spoken interaction: When language users act alternately as speaker and listener with one or more interlocutors to

construct conjointly, through negotiation of meaning following the co-operative principle, conversational discourse.

Strategy: An individual instructional activity as it occurs in the classroom with built-in support for English language learners. It is the action plan to do a task, which requires a cognitive activity feature for acting. It implies priory acquired abilities and skills from the students (types: conceptual, directional, organizational, application).

Task: A goal oriented communicative activity with a specific outcome, where the emphasis is on exchanging meaning, not producing specific language forms.

Technique: It is a particular 'trick', stratagem used to accomplish an immediate objective. It must be consistent with a method and in harmony with an approach as well. It is the way a teacher carries out a procedure to develop content; for instance, group discussions, dramatizations, etc.

Text: Any form of communication, whether visual, oral, written, or multimedia (including digital media), that constitutes a coherent, identifiable unit or artefact (e.g., poem, poster, conversation, and model) with a definable function. It refers to visual forms such as illustrations, videos, and computer

displays; oral forms including conversations, speeches, dramatizations; and printed texts in their varied forms.

Themes: The subtopics, subjects of discourse, conversation, reflection or composition as the focus of attention in particular communicative acts.
